Weekly Commodity Overview

Tuesday, March 25, 2014 15:30 GMT

Market Highlights

ASIA-PACIFIC REGION

China FDI growth slows; Japanese trade data miss estimates

Foreign direct investment into China gained 10.44% year-on-year in the period between January and February that is a much slower pace compared to a 16.1% increase in the preceding period. Meanwhile, another large Asian economy, Japan, released a gloomy trade data last week. Annual exports of the country added 9.8% in February versus an expected jump of 12.4%. Imports added 9% on an annual basis, more than a 7.4% gain predicted by experts. This resulted in a trade deficit of 1.13 trillion yen compared to 1.76 trillion in January.

EUROPE

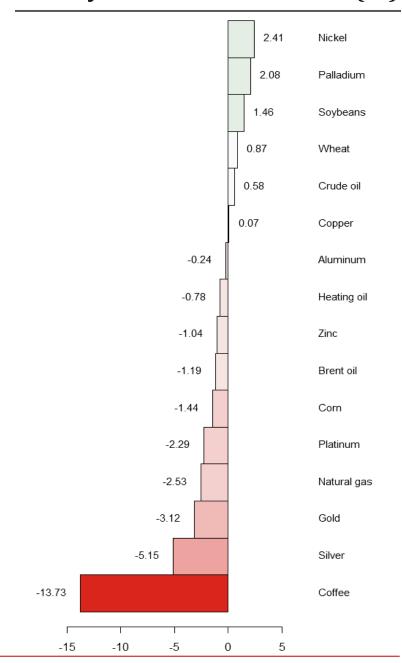

Disinflation continues; German investor confidence deteriorates

Consumer prices in the single currency area grew at slower pace in February, adding to worries over a possible deflation in the region. Consumer CPI added 0.7% year-on-year last month, while experts predicted a 0.8% increase, the same pace as in January. Disinflation persisted in the region for the fourth month. At the same time, German ZEW investor confidence index dropped to 46.6 in March from 55.7 in February, while market consensus was 52.

NORTH AMERICA

Fed reduces stimulus; U.S. data mostly positive

The Fed at its meeting last week left its key interest rate unchanged at zero to 0.25% but cut its monthly bond-purchasing programme by \$10 billion to \$55 billion. Moreover, many Fed officials said that rates may be raised as early as in 2015. Meanwhile, housing market showed mixed signals, with building permits surpassing expectations last month and existing home sales unexpectedly declining. Housing starts were in line with forecast in February. Consumer prices also remained steady, adding 0.1%, the same as last month and perfectly meeting forecasts. Labour market data was on the positive side, with the number of Americans applying for jobless benefits staying near a four-month low last week.

also were at a play.

Gold was paring gains last week as support pertaining to persistent worries over turmoil in Ukraine started to wane. Furthermore, the downside pressure was exacerbated on Wednesday when the Fed reduced its monthly pace of bond-buying by \$10 billion to \$55 billion and most of the officials said they expect a rate increase in 2015. Stronger U.S. Dollar as well as positive data from the world's largest economy

Meanwhile, the recent climb in prices to a six-month high curbed physical demand potential in Asia. China, which overtook India as the world biggest importer last year, may see a drop in its purchases in the second quarter. China's imports are expected to plunge up to 17% on an annual basis in the current quarter amid slowing economic growth in the country and higher bullion's prices.

Silver was on the down-trend last week, being pressurized by weak gold prices and the U.S. stimulus cut. Moreover, the grey metal, being mostly a safe-haven asset even despite the fact it is used for industrial purposes, also lost its favor amid lack of a further escalation of geopolitical tensions over Crimea. Meanwhile, investment demand was on the rise, with holdings in total known ETFs adding 0.29% last week.

Platinum and Palladium were mixed last week despite a strong supply-side support. Top three global platinum producers have already lost more output because of the current stoppages than during strikes in 2012 that means we may see wider shortages of the metal used in automobile industry this year. As concerns its peer, palladium, it managed to use support linked to a possible sanctions imposed on Russia, the largest exporter of the metal. Palladium ended the week with a 2.29% loss, while platinum gained about 2%.

13 007

Aluminum prolonged the run of losses last week as recent weak industrial data from China coupled with the Fed decision to continue reducing stimulus weighted on the metal. However, the downswing remained restricted as aluminum market may record a deficit this year due to output cuts by the world's largest producers. Since late 2012, total production reductions have amounted around 2.4 million tonnes; this may push demand above supply by 1.3 million tonnes in 2014.

Copper commenced a week near the lowest mark since 2010 as China widened the Yuan trading range against the U.S. Dollar thus reducing copper's appeal to Chinese investors who used the red metal as a collateral for obtaining credit. Moreover, longstanding factors such as slowing China's economy and tensions in Ukraine continued to push the base metal lower. Notwithstanding this, copper closed up 0.07% last week.

Nickel remained in the positive zone last week amid worries that Russian supplies may be disrupted by sanctions later in the year that may result in a wider deficit given that Indonesia, the world top exporter, banned metal ore exports in January 2014. Nickel markets may be in shortage of 35,000 tonnes in 2015 compared to a surplus of 68,000 tonnes expected this year. This will be the first deficit since 2010, according to the data released by the International Nickel Study Group.

Zinc lost over 1% despite support connected to a deficit on the markets last year. According to the latest report of the ILZSG, demand for the metal rose 7.4% in 2013 versus a 3.3% decline in 2012, mainly due to 13.7% and 12.3% jumps in China's and India's consumption, respectively. Last year, zinc markets recorded a deficit of 60,000 pared to a surplus of 236,000 tonnes in the preceding year.

WTI and Brent oil performed poorly on Monday; however, a rally in the rest of the week almost covered early losses. On Monday, ideas that Crimea's vote to join Russia will not produce any impact on the oil transit through Ukraine calmed investors thus forcing energy prices to descend from one-week high. WTI also received a boost from the developments in the U.S. where Enterprise Products Partners LP said that it would increase considerably the capacity of Seaway pipeline earlier than expected, in May.

At the same time, energy prices entered a red zone in the second part of the week after the EIA released its weekly inventory report on Wednesday. The report unveiled that U.S. stockpiles rose much more than experts had predicted. Inventories soared 5.9 million barrels in the week ended March 14 compared to estimates of a 2.4-millionbarrel gain. In the preceding week, stockpiles also jumped more than expected, by 6.2 million barrels versus a forecast of a 2.1-million-barrel increase.

Natural gas was losing its value as spring weather forecasts in the U.S. put a heavy selling pressure on the commodity. However, natural gas managed to gain some ground on Thursday after the EIA reported that the U.S. storage dropped in the week ended March 14; however, a decline was slightly smaller than expected. Inventories plunged 48 billion cubic feet versus a forecast of a decline of 58 billion cubic feet.

Heating oil, unlike WTI, was supported by the EIA report, showing that distillate fuel inventories in the U.S. plummeted more than projected in the week ended March 14. Distillate fuel supplies, which include heating oil and diesel, slumped 3.1 million barrels, while experts called for a 900,000-barrel drop. However, the commodity ended the week with a 0.78% loss after retreating more than 2% in the preceding week.

Cof

Wh Soybe

Wheat started the week with a small loss as predictable results of Crimea referendum as well as lack of exact measures from the western nations removed supply riskpremium. However, the following sessions were more positive for wheat futures. On Tuesday, the USDA reported a further deterioration in the winter wheat condition amid cold, dry and windy weather. Additional supportive factor came from the demand side. Egypt, the world's top importer, bought 175,000 tonnes from the U.S., Russia and Romania. However, a climb to a 10-month high in the first part of the week turned a negative factor since high prices started to erode demand.

Corn declined amid signs that political turmoil in Ukraine has not impacted grain shipments from the country. Ukraine exported about 700,000 metric tonnes in the week ended March 16 compared to 480,000 tonnes in the preceding week. However, the same as wheat, corn saw pressure stemming from elevated prices that were weighting on consumption. On Wednesday, Taiwan refused to buy 60,000 tonnes of the grain in a tender, citing high prices. Corn futures closed 1.44% lower last week.

Soybeans traded higher despite concerns over a possible continuation of order cancelations by China and progress in Brazilian harvest despite rainfalls. According to Safras, the Mato Grosso harvesting is 84% complete despite unfavorable weather; this compares well to 87% completion rate in the same period last year. The oilseed managed to close with a 1.46% gain also as tightening U.S. ending stocks offered a strong support.

Coffee was the top loser last week after posting record gains in the preceding weeks. The previous rally was fuelled by ideas that long-awaited rains in Brazil may fail to revive drought-stricken crops. Volcafe has recently reduced its estimate of the global ending stocks in 2014/15 to a deficit of 6.5 million bags, the first deficit in five years.
