

KEY INFORMATION DOCUMENT

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

You are about to purchase a product that is not simple and may be difficult to understand.

Product name	Contracts for difference (CFDs) on bonds
Product distributor	Dukascopy Europe IBS AS
Distributor contact details	www.dukascopy.eu / +371 67 399 000
Distributor supervisory authority	Latvijas Banka (Bank of Latvia)
Product manufacturer	Dukascopy Bank SA
Manufacturer contact details	www.dukascopy.com / +41 22 799 4888
Manufacturer supervisory authority	Swiss Financial Market Supervisory Authority (FINMA)
Document revision date	01.10.2026

What is this product?

Type. An over-the-counter, leveraged contract for difference linked to the government bond market. The product range includes instruments on German, US and UK government bonds. You can open a long (buy) or short (sell) position. You do not own the bonds or acquire rights to their coupons or repayment of principal. The contract is cash-settled.

Objectives. The product allows you to speculate on bond price movements or hedge the risk of an existing bond portfolio. A long position benefits from a price increase and a short position benefits from a price decrease. An adverse price movement results in losses. The result depends on the price difference, position size and costs and adjustments. Bond prices are affected by interest rates and issuer credit risk. Hedging may be imperfect and does not guarantee a particular outcome.

Pricing uses the relevant bond futures under the instrument specifications. Switching the underlying futures contract may change the CFD price and give rise to a debit or credit adjustment to the account. This is not a bond coupon payment. Available instruments, point values, adjustment calendars and trading terms are listed on the website and platform.

Intended retail investor. Investors with advanced knowledge of CFDs and leverage, experience in speculative financial markets and the financial capacity to lose all funds invested in their CFD account. Active monitoring of positions and margin is required. The product is not intended for capital preservation or guaranteed income.

Term. The CFD has no fixed maturity. When the underlying futures contract expires, the pricing basis is switched to another contract. You can close a position during the instrument's trading hours. Dukascopy Europe may close it in circumstances specified in the agreement, including insufficient margin, market disruption, limited liquidity or withdrawal of the instrument from trading.

What are the risks and what could I get in return?

Lower risk

Higher risk

The summary risk indicator is 7 out of 7, the highest risk class. It helps you compare the product's risk with other products. The risk of loss due to market movements or a failure to pay is very high. This product does not provide capital protection.

Leverage magnifies profits and losses. You may lose all funds invested in your CFD account, not only the margin for an individual position. For retail clients, negative balance protection limits aggregate liability for CFDs to the funds in the relevant CFD account. It does not protect those funds against trading losses. Insufficient margin may trigger automatic closure of one or more positions.

Price gaps, wider spreads, limited liquidity and technical disruption may worsen execution or delay closing a position. A stop-loss order does not guarantee the specified price. If the instrument and account currencies differ, exchange-rate changes also affect your return. This currency risk is not reflected in the indicator shown.

Performance scenarios

The example concerns 200 CFD contracts on German government bonds, BUND.TR/EUR. The opening price is EUR 130, notional EUR 26'000, minimum margin EUR 5'200 at leverage of 1:5 and initial equity EUR 6'000. A price point is EUR 0.01, so a one-point change on 200 contracts produces a profit or loss of EUR 2. The scenario illustrates closing within the same trading day without overnight costs.

Scenario	Long Change / price	Profit / loss	Equity	Short Change / price	Profit / loss	Equity
Stress	-7% / 120.9	-1'820 EUR	4'180 EUR	+7% / 139.1	-1'820 EUR	4'180 EUR
Unfavourable	-2% / 127.4	-520 EUR	5'480 EUR	+2% / 132.6	-520 EUR	5'480 EUR
Moderate	-0.25% / 129.68	-65 EUR	5'935 EUR	+0.25% / 130.33	-65 EUR	5'935 EUR
Favourable	+1% / 131.3	+260 EUR	6'260 EUR	-1% / 128.7	+260 EUR	6'260 EUR

The table shows the result of price movements before costs. Trading costs reduce profits or increase losses and are shown in the next section. The scenarios are not forecasts. Actual results depend on the market, holding period and execution. The stress scenario is not the worst possible outcome and does not cover a failure to pay. Taxes have not been taken into account.

What happens if Dukascopy Europe is unable to pay out?

If Dukascopy Europe IBS AS cannot fulfil its obligations, an investor who meets the conditions of the Latvian Investor Protection Law is entitled to compensation based on the total unfulfilled obligations, up to EUR 20'000 in aggregate regardless of the number of accounts. This is not a deposit guarantee and does not cover losses from market-price changes or illiquidity. Latvijas Banka determines the payment procedure and time limits. A failure by the manufacturer or another counterparty may affect the product but does not itself guarantee compensation. Further information: www.bank.lv.

What are the costs?

Costs depend on the instrument, position size, holding period and applicable tariff. The person selling you the product or advising you may charge additional costs and will provide separate information about them.

Costs over time

The example is based on 200 BUND.TR/EUR contracts with a notional value of EUR 26'000. For the cost illustration the position is held overnight and closed the next day. It assumes a long position, the highest commission and least favourable overnight policy used in the source example, and no change in the underlying price.

Holding period	After 1 day
Total costs	-85.76 EUR
Cost impact	-0.33%

The percentages show the cost impact relative to the EUR 26'000 notional, not the EUR 5'200 margin or EUR 6'000 account equity. If the price is unchanged, costs result in a loss. Holding the position longer gives rise to additional overnight costs, which may change.

Composition of costs

Cost type	Long position	Short position	Description
One-off costs Spread	-81.4 EUR -0.31%	-81.4 EUR -0.31%	The difference between bid and ask prices. It varies with market liquidity.
One-off costs Trading commissions	-2.73 EUR -0.01%	-2.73 EUR -0.01%	Commission for opening and closing transactions. Rates and minimums depend on the market and applicable tariff.
Ongoing costs Overnight holding	-1.63 EUR -0.01%	-1.45 EUR -0.01%	A charge or credit for holding a position past settlement. It depends on the instrument, direction and overnight policy.
Incidental costs Performance fees	Not applicable	Not applicable	
Incidental costs Carried interest	Not applicable	Not applicable	
Total costs	-85.76 EUR -0.33%	-85.58 EUR -0.33%	

A minus sign denotes a cost reducing the result. Actual spreads, overnight rates and commissions may differ. Applicable platform surcharges, currency conversion and other transaction-related charges must be included in the cost information provided to the client. Full tariffs are available at the link below.

How long should I hold it and can I take money out early?

There is no mandatory minimum holding period. Bond CFDs are generally used for short-term trading. The example scenarios cover one trading day. You can close a position during the instrument's trading hours, subject to liquidity and execution conditions. Normal trading costs apply on closing. Available funds may be withdrawn under the account terms, subject to margin requirements for open positions.

How can I complain

Submit a complaint free of charge to your account manager, by email to legal@dukascopy.eu or by post to Dukascopy Europe IBS AS, Marijas iela 2A, Riga, LV-1050, Latvia. You may also call +371 67 399 000. Provide your contact details, the relevant transaction and the nature of your complaint. Your right to contact Latvijas Banka or a court remains unaffected.
