PFSoft releases multi-asset front-end

PT Multistation now gives traders unique flexibility to connect to several Brokers and Data feeds from a single trading terminal. It is already integrated with about 20 destinations including FXCM, Currenex, MBTrading, dbFX, Dukascopy, Interactive Brokers, PATS, IQFeed and Ameritrade. Multiple trading accounts can be grouped into one master accounts to trade with all brokers by one click. A key advantage is that PT

Multistation provides complete support for MQL4 and Easy Language scripts, so traders can apply their old trading systems and indicators with any broker without wasting time on script rewriting. Additional features like DOM Matrix, Visual Trading, Risk Management Alerts, Back-testing with Debugger and Scanners makes PT Multistation a complete front-end for multi-asset trading.

Client support tops 25 languages at MIG

MIG Investments has expanded its multilingual client support through the recent introduction of new language desks including Hindi, Urdu, Bahasa (Indonesian), Greek, Swedish and Norwegian. It has also launched its corporate website in Korean and is preparing similar launches for more languages to come

soon. MIG Investments now offers client support in over 25 languages, including English, Afrikaans, Arabic, Cantonese, Czech, Danish, French, German, Italian, Japanese, Korean, Malay, Mandarin, Polish, Portuguese, Russian, Slovak, Spanish, Turkish and Ukrainian with strong local business affinity across five regions.

Dukascopy offers Jforex multiple pairs backtesting

Automated trading is becoming more popular and Dukascopy through its Jforex platform is catering to this segment in a unique way. Professional traders can now profit from more freedom whilst implementing and executing automated strategies. In the case of JForex, traders can develop a strategy based on multiple currency pairs, with the possibility of running a back test for the selected multiple pairs within one trading

strategy. Regarding historical testing, traders are always concerned about the quality of the back tests. The tests' results usually cannot be highly accurate because data interpolation is used instead of the real tick data. JForex is able to solve this problem by offering real tick data for the historical tester.

Barclays Capital launches PowerFill+

Barclays Capital has launched PowerFill+, a suite of online foreign exchange tools providing clients with revolutionary order management and access to deeper liquidity. This new functionality on BARX, the firms electronic trading platform, is free to use. The main feature of PowerFill+ is that it allows clients to anonymously work bids and offers. The best bid/ offer forms part of the price that users see.

MetaTrader 5: On the final straight

The 9th of September 2009, was the first day of closed beta testing of the new MetaTrader 5 client terminal. The closed period will last one month and starting from the 9th of October 2009 open testing will begin. The official release of MetaTrader 5 will be preceded by several testing stages to ensure that it is a reliable and robust platform.
