

# To win in the Forex, avoid conflict of interest with a broker.

Dukascopy Suisse gives you the access to the biggest marketplace in the world, by combining a leading technology applied to a business model that associates the prices of all the FX participants in order to provide extensive liquidity and smallest spreads. Our development allows us to combine the prices of major FX Markets around the world, creating competition and therefore enabling clients to trade in the best conditions via ONE access, the SWFX – Swiss FX Marketplace.

**Dukascopy Suisse Fx Group operations are divided in two activities:**

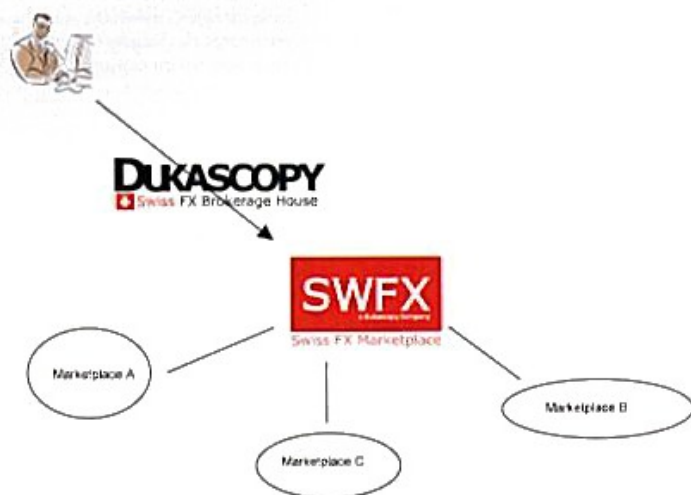

The SWFX is Dukascopy's technology solution and registered trademark, specialized in institutional liquidity and instant execution.

The SWFX technology is able to monitor each network partner's order book in order to take every opportunity to execute the clients' orders with better prices. Fluctuations of prices between the network participants make this type of activity very profitable for the clients of Dukascopy, allowing them to enjoy a vast and

reliable liquidity drawn from all over the globe as well as the smallest spreads in the industry.

By trading in the Swiss FX Marketplace, the only one in Switzerland, our clients benefit from the security and confidentiality unique to the Swiss regulatory environment. In this market, the participants act on an equal and transparent basis. Being a Marketplace (ECN), the SWFX insures a total absence of conflict of interest between buyers and sellers, contrary to Market

Makers (Broker/dealer desk) who act as counterparty to their clients.

Based in Switzerland, land of confidentiality, we assign great importance to individual's rights and therefore have a long-lasting tradition of strict professional ethics.

The SWFX-Dukascopy trading platform ensures full risk management, and total control over the order execution. Clients may trade billions of dollars in a secure "one-click" trading environment. Support is also available via a 24/6 trading desk if a client chooses to trade over the phone.

Providing such a marketplace technology, Dukascopy has no exposure risk, as all trades are executed in the network with Forex participants. Dukascopy gives full transparency by providing the clients, upon their request, with reports of specific deals to see who the counterparty of the trade is.

To cite a few examples of practical achievements from this technology, Dukascopy would like to mention that every client is able to trade 100 million GBP/USD and 200 million EUR/USD in **One Click** with effective spreads of 4-5 pips. When trading smaller amounts, one can obtain spreads as low as to 0-1 pips for majors.
